

Let Data Drive Your Supply Chain

Streamline operations. Reduce cost.
Improve customer satisfaction.

A data-driven supply chain ensures the right products are delivered to the right place at the right time.

A Flexible and Resilient WMS

Explore unprecedented visibility, actionable insights, and collaboration across your entire supply chain ecosystem, starting with fulfillment and distribution. Deliver at scale and respond to changing market conditions. Build resilience without risk, meet demand, and your business objectives at the same time.

Data Is The 3PL Advantage

Data can serve as the logistics brain for 3PLs, enabling seamless inventory fulfillment across multiple customers, geographies, and extensive SKU catalogs. Data also ensures complex regulatory compliance effortless through:

Actionable insights | Performance monitoring | Improving supply chain visibility
Optimizing operations | Supporting risk management

By leveraging data effectively, 3PLs can deliver value-added services, drive operational excellence, and strengthen their position as trusted logistics partners.

Pivotree Control Tower:

A Powerful Visualization and Management Tool

Data-driven analytics with user-friendly dashboards and robust reporting capabilities to drive insights and monitor the health of your systems.

[Learn about Control Tower](#)

A data-driven supply chain provides insights, facilitates decision-making, and optimizes operations.

Order Processing

Capture and process order information to enable streamlined processing and automated warehouse allocation.

Inventory Management

Optimize inventory levels by leveraging historical sales data, demand patterns, lead times, and supplier performance data.

Warehouse Efficiency and Performance

Data-driven insights enable efficient warehouse layout design, product placement, and inventory organization, plus minimize order fulfillment and manage labor productivity.

Automation and Robots

Real-time data enables automated picking, sorting, packing, and shipping processes, reducing human error, increasing speed, and improving overall efficiency.

Shipping and Logistics

Data informs packaging options, calculates accurate shipping costs, optimizes logistics channels, and ensures timely delivery.

Customer Experience

Data enables personalized customer experiences by capturing and analyzing customer preferences, purchase history, and feedback.

Returns Management

Capture return reasons, analyze return patterns, and automate return processing to improve efficiency, reduce costs, and enhance customer satisfaction.

Supply Chain Collaboration

Data sharing and integration across supply chain partners facilitate collaboration and seamless coordination.

Contact us for more information on how we can help optimize data to resolve your supply chain challenges.
