

Flexible. Connected. Data Driven. Adaptive

Pivotree WMS
Warehouse Management System
Feature Guide

Pivotree WMS

What's more, we've combined this microservices architecture with Machine Learning (ML) and Artificial Intelligence (AI) capabilities—both automated or moderated (suggest and approve or reject)—so you can improve efficiency, but still retain control.

Overview

Pivotree WMS, is the flexible, connected, data driven, adaptive warehouse management system of the future.

We've taken the original Pivotree Warehouse Management System and combined it with our deep warehousing knowledge to rebuild each core process from the ground up for a true microservice approach.

Each process is completely separate and independent, which gives you the flexibility to roll out, or enhance, one process at a time so you can continuously improve efficiency and performance without a big new initiative.

Key Benefits

- ✓ Roll out standard processes across multiple sites easily and cost effectively
- ✓ Quickly roll out custom processes by site or customer
- ✓ Easily add inventory attributes and create business rules based on those attributes for better inventory control
- ✓ Onboard new customer quickly
- ✓ Achieve near real-time inventory visibility so you can maintain fill rates and perfect order rates
- ✓ Receive alerts for inventory expiry and use FEFO/FIFO to manage inventory to prevent obsolescence
- ✓ Consolidate containers and shipments to reduce shipping costs

MULTI-SITE MANAGEMENT

Plant
Warehouse

Regional DCs -
Customer Direct,
Store replenishment

Stockrooms,
Strategic Spares
Locations

Returns/repair

CUSTOM PROCESSES BY SITE

UNIFIED PROCESSES ACROSS SITES

Key Features

Multi-site management

- ✓ **Manage all sites from a single instance** – from back storage rooms to large, highly automated facilities
- ✓ **Get real-time inventory and fulfillment visibility** across all facilities

Events and alert management

- ✓ **Realtime monitoring and self-healing** of inventory and shipment **exceptions**
- ✓ Support for **proactive monitoring** (auto replenishment based on min-max) or **reactive monitoring** (get notified on Slack if a shipment is put on hold)

Flexible task-based operations

- ✓ **Configure types of tasks and assign users, teams and/or equipment** for execution
- ✓ Configure whether a task is paper based, mobile or integrated with a material handling equipment
- ✓ **Real-time visibility** to task execution status

Code-free process modeling

- ✓ Supports **multiple sets of unique business processes within a facility** (e.g., unique picking strategy per channel or division)
- ✓ Ability to extend the product capabilities through the service definition framework

Mobile device agnostic

- ✓ Can run on **any mobile device** that support HTML5. For more details, see Pivotree Mobile.

Rapid deployment templates

- ✓ Create **warehouse templates** with pre-configured rules, to accelerate onboarding of new facilities and/or customers
- ✓ Enable **standard rules across facilities** and allow modifications by process

Integration management

- ✓ **Any-to-Any Integration** management with prebuilt integration accelerators. For more details, see Pivotree Connect.

Localization and internationalization

- ✓ Supports **multiple locale's and languages** in a single instance and defining languages at the **user level**

Painless upgrades

- ✓ **Upgrade with in-place customizations**
- ✓ Minimal disruption to operations

Proven performance

- ✓ Proven performance managing **1,000,000+ square foot** facilities, processing **625,000+ parcel orders lines per day**
- ✓ Single instance can host **300+ Warehouses** across the globe and **60+ customers** (with unique processes) per warehouse

Ready to accelerate your warehouse management?

Say goodbye to siloed inventory and slow onboarding of new sites and customers. Schedule a Pivotree WMS demo today or contact us for more information:
